

NAME \_\_\_\_\_

Log Dates \_\_\_\_\_

### LUNAR OBSERVATION LOG

For each date, observe the Moon and **SKETCH** the **illuminated part** in the phase column. If you know the name of the phase, write that under the drawing in the phase column. Note the date and time of observation and make any appropriate comments. If you cannot see the Moon because of inclement weather, note that in the comments section. If you draw the entire moon and show the phase, be sure to indicate whether the shaded or unshaded part represents the bright part of the Moon. **Your log must contain at least 35 consecutive days when you looked for the Moon.**
